Day 12 Task Workflow — Saturday, Mar 8, 2026

> **Sprint:** 3 (Intelligence Integration) | **Phase:** LLM Gateway + Threat Intel + E2E Pipeline
> **Owner:** Lead Architect | **Status:** ⬤ Ready to Start
> **Goal:** Full LLM integration via OpenRouter, Threat Intel feeds (OTX + AbuseIPDB), E2E pipeline validation
> **Grade:** Week 3 Day 2 COMPLETE ☑ | Week 3 Day 3 STARTING ⬤

Day 11 Results Context (Critical)

ML Worker + Alert Engine + Flow Scorer are DEPLOYED and RUNNING on VPS:

```
Container Status:
  tm-backend     ☑ Running (FastAPI, 26 endpoints)
  tm-capture     ☑ Running (63 features per flow)
  tm-ml-worker   ☑ Running (3 models loaded, subscribed flows:live)
  tm-postgres    ☑ Healthy (2 days uptime)
  tm-redis       ☑ Healthy (2 days uptime)

ML Worker:
  ☑ Isolation Forest loaded (isolation_forest.pkl)
  ☑ Random Forest loaded (random_forest.pkl)
  ☑ Autoencoder loaded (model.keras, threshold=0.631359)
  ☑ Preprocessor loaded (encoders + scaler .pkl)
  ☑ Redis connected, subscribed to flows:live

New Components (Day 11):
  ☑ FlowPreprocessor — live flow → 40-feature scaled array
  ☑ AlertEngine — alerts:live → PostgreSQL alerts table
  ☑ FlowScoreUpdater — ml:scored → network_flows.anomaly_score
  ☑ LLMGateway — scaffold with prompt templates (no API keys yet)
  ☑ ML Worker — full inference loop running

Ensemble: 80.73% acc | 0.8096 F1 | 0.9312 AUC-ROC (114.1s training)
```

ARCHITECTURAL DEVIATION: LLM Provider Change

Change: All LLM calls routed through **OpenRouter** instead of direct provider APIs.

Rationale: Cost optimization + access to best-of-class free models + single API key management.

What changed:

- Single `OPENROUTER_API_KEY` replaces `DEEPSEEK_API_KEY`, `GROQ_API_KEY`, `GLM_API_KEY`
- OpenRouter API is OpenAI-compatible (`https://openrouter.ai/api/v1`)
- Model routing still follows PART4 §9.1 task-type mapping

What did NOT change:

- Gateway middleware stack (budget check, cache, rate limiter, prompt builder, token counter)
- Prompt templates (PART4 §9.2)
- Streaming SSE pattern (PART4 §9.3)
- Task-to-model routing logic (complex→best, realtime→fast, bulk→cheap)
- Alert thresholds, ensemble weights, ML pipeline — UNCHANGED

Provider Mapping (OpenRouter):

Task Type	PART4 Original	OpenRouter Model	Why
Complex Analysis	DeepSeek V3	`nvidia/llama-3.1-nemotron-ultra-253b-v1:free`	253B params, best reasoning, free
Real-time Alerts	Groq Llama 3.3	`stepfun/step-3.5-flash:free`	196B MoE (11B active), fastest, free
Chat / General	DeepSeek V3	`openai/gpt-oss-120b:free`	117B MoE (5.1B active), strong general, free
Bulk / Translation	GLM-4-Flash	`zhipu-ai/glm-4.1v-9b-thinking:free`	GLM family, bilingual, free
Coding / Fallback	Together Llama	`qwen/qwen3-coder-480b-a35b:free`	Massive code model, fallback, free

Budget: $20 OpenRouter credits loaded. At free-tier pricing = effectively unlimited for development + demo.

Day 12 Objective

By end of day:

- LLM Gateway fully functional with OpenRouter: chat, alert analysis, briefing, translation all working
- LLM API endpoints live: POST /llm/chat (streaming SSE), POST /llm/analyze-alert/{id}, POST /llm/briefing, POST /llm/translate
- Threat Intel service scaffolded: OTX client + AbuseIPDB client
- E2E pipeline validated: capture → ML score → alert → LLM narrative
- Budget tracking functional

> **NOTE:** Frontend tasks remain with Full-Stack Dev. This covers **Lead Architect tasks only.**

Scope Adherence Checklist

Requirement	Source Document	Section	Deviation?
LLM Gateway multi-provider routing	MASTER_DOC_PART4	§9.1	⚠ OpenRouter replaces direct APIs — routing logic preserved

Requirement	Source Document	Section	Deviation?
Prompt templates (4 types)	MASTER_DOC_PART4	§9.2	☑ No change
Streaming SSE via FastAPI	MASTER_DOC_PART4	§9.3	☑ No change
Budget tracking + cost logging	MASTER_DOC_PART4	§10.2, middleware stack	☑ No change
POST /llm/chat	MASTER_DOC_PART2	§5.1	☑
POST /llm/analyze-alert/{id}	MASTER_DOC_PART2	§5.1	☑
POST /llm/briefing	MASTER_DOC_PART2	§5.1	☑
POST /llm/translate	MASTER_DOC_PART2	§5.1	☑
GET /llm/budget	MASTER_DOC_PART2	§5.1	☑
OTX feed integration	MASTER_DOC_PART4	§11.1	☑
AbuseIPDB lookup	MASTER_DOC_PART4	§11.1	☑
IOC correlation with flows	MASTER_DOC_PART4	§11.3	☑ Scaffolded

Task Breakdown

TASK 1 — LLM Gateway: OpenRouter Integration ⬛

Time Est: 120 min | **Priority:** ⬛ Critical

Rewrite `app/services/llm_gateway.py` to use OpenRouter as the unified provider with model routing.

1.1 Update LLMGateway Implementation

```
"""
ThreatMatrix AI — LLM Gateway Service (OpenRouter)

ARCHITECTURAL DEVIATION from MASTER_DOC_PART4 §9.1:
  - All providers routed through OpenRouter (https://openrouter.ai/api/v1)
  - Single OPENROUTER_API_KEY replaces per-provider keys
  - Model routing preserved: task_type → best model for that task
  - Middleware stack unchanged: budget, cache, rate limit, prompt, token count

Providers via OpenRouter:
  - nvidia/llama-3.1-nemotron-ultra-253b-v1:free  → Complex analysis
  - stepfun/step-3.5-flash:free                    → Real-time alerts
  - openai/gpt-oss-120b:free                       → Chat / General
```

```
  - zhipu-ai/glm-4.1v-9b-thinking:free            → Bulk / Translation
  - qwen/qwen3-coder-480b-a35b:free               → Coding / Fallback
"""

            max_tokens=2000,
        )

    def get_budget_status(self) -> Dict[str, Any]:
        """Return budget and usage stats."""
        return {
            "enabled": self.enabled,
            "provider": "openrouter",
            "credits_loaded": 20.0,
            "stats": self.stats,
            "models_available": list(set(
                m for models in TASK_MODEL_ROUTING.values() for m in models
            )),
        }
```

```
    async def close(self) -> None:
        """Close HTTP client."""
        if self._client and not self._client.is_closed:
            await self._client.aclose()
```

1.2 Add Environment Variable

Add to `.env` on VPS:

```
OPENROUTER_API_KEY=sk-or-v1-XXXXXXXX
```

Add to `docker-compose.yml` backend + ml-worker env:

```
  backend:
    environment:
      - OPENROUTER_API_KEY=${OPENROUTER_API_KEY}
```

Verification:

#	Check	Expected
1	LLMGateway imports	No errors
2	Gateway detects API key	"[LLM] OpenRouter gateway initialized"
3	Task routing returns correct model	ALERT_ANALYSIS → nemotron, CHAT → gpt-oss
4	Non-streaming chat works	Returns content string
5	Streaming chat yields tokens	Token-by-token output
6	Fallback on primary failure	Tries secondary model
7	Stats tracking	requests, tokens_in, tokens_out updated
8	Prompt templates format correctly	No KeyError
9	analyze_alert() works	Returns narrative text
10	translate() works	Returns Amharic text

TASK 2 — LLM API Endpoints 🟤

Time Est: 90 min | **Priority:** 🟤 Critical

Create `backend/app/api/v1/llm.py` with all 5 endpoints per PART2 §5.1.

2.1 Implement LLM Router

```python
"""
ThreatMatrix AI — LLM API Endpoints

Per MASTER_DOC_PART2 §5.1:
  POST /llm/chat              → Streaming AI chat (SSE)
  POST /llm/analyze-alert/{id} → Generate alert narrative
  POST /llm/briefing           → Generate threat briefing
  POST /llm/translate          → Translate to Amharic
  GET  /llm/budget             → Token usage and budget
"""

from __future__ import annotations

    }

@router.get("/budget")
async def get_budget():
    """Token usage and budget status."""
    gateway = get_gateway()
    return gateway.get_budget_status()
```

2.2 Mount LLM Router

Add to `backend/app/api/v1/__init__.py`:

```
from app.api.v1.llm import router as llm_router
api_router.include_router(llm_router)
```

2.3 Initialize Gateway in Lifespan

Add to `backend/app/main.py` lifespan:

```
from app.services.llm_gateway import LLMGateway
from app.api.v1.llm import set_gateway

llm_gw = LLMGateway()
set_gateway(llm_gw)
```

Verification:

#	Check	Expected
1	POST /llm/chat (stream=true)	SSE tokens stream
2	POST /llm/chat (stream=false)	JSON response with content
3	POST /llm/analyze-alert/{id}	Narrative text
4	POST /llm/briefing	Executive briefing text
5	POST /llm/translate	Amharic translation
6	GET /llm/budget	Stats with credits_loaded
7	OpenAPI /docs shows all 5 endpoints	Visible in Swagger
8	Rate limiting works	No crash on rapid requests

TASK 3 — Threat Intel: OTX Integration

Time Est: 60 min | **Priority:** 🟢 Medium

Create `backend/app/services/threat_intel.py` per PART4 §11.

3.1 AlienVault OTX Client

```
"""
ThreatMatrix AI — Threat Intelligence Service

Per MASTER_DOC_PART4 §11:
  - AlienVault OTX: Pull pulses, IOCs (free, unlimited)
  - AbuseIPDB: On-demand IP reputation lookup (free, 1K/day)
  - Normalizer: Deduplicate, score merge, tag enrich
  - Correlator: Match IOCs against live network flows
"""

    }
}

r.publish('flows:live', json.dumps(test_flow))
print('Published suspicious test flow to flows:live')
time.sleep(2)

# Check if ML Worker scored it
print('Checking ml:scored channel...')
pubsub = r.pubsub()
pubsub.subscribe('alerts:live')
# Quick check
msg = pubsub.get_message(timeout=5)
print(f'Alert message: {msg}')
"
```

5.2 Verify Pipeline Steps

```
# 1. Check worker processed the flow
docker compose logs ml-worker --tail=10

# 2. Check if alerts:live received the alert
docker compose exec backend python3 -c "
import redis
r = redis.Redis(host='redis', port=6379, decode_responses=True)
```

```
# Check recent alerts via API
import urllib.request, json
with urllib.request.urlopen('http://localhost:8000/api/v1/alerts/?limit=5') as
resp:
    data = json.loads(resp.read())
    print(json.dumps(data, indent=2))
"

# 3. Test LLM endpoint
docker compose exec backend python3 -c "
import urllib.request, json
req = urllib.request.Request(
    'http://localhost:8000/api/v1/llm/chat',
    data=json.dumps({
        'messages': [{'role': 'user', 'content': 'What is a SYN flood attack?'}],
        'task_type': 'chat',
        'stream': False
    }).encode(),
    headers={'Content-Type': 'application/json'}
)
with urllib.request.urlopen(req) as resp:
    print(json.loads(resp.read())['content'][:500])
"

# 4. Check LLM budget
curl -s http://localhost:8000/api/v1/llm/budget | python3 -m json.tool
```

Verification:

#	Check	Expected
1	ML Worker scores test flow	Log shows scoring
2	Alert created for suspicious flow	Alert in database
3	LLM chat returns response	Non-empty content
4	LLM budget endpoint works	Shows stats
5	All 5 containers stable	`docker compose ps` all "Up"
6	No crashes after 10+ minutes	Containers remain healthy

TASK 6 — Add httpx Dependency 🟢

Time Est: 5 min | **Priority:** 🟢 Quick

Add `httpx` to `backend/requirements.txt` for async HTTP client (used by LLM Gateway + Threat Intel).

```
httpx>=0.27.0
```

Verification:

#	Check	Expected
1	Docker builds without pip errors	httpx installed
2	`import httpx` works in container	No ImportError

28-Point Verification Checklist

#	Verification	Expected
1	LLMGateway imports	No errors
2	OpenRouter API key detected	"initialized" log
3	Task routing: ALERT → nemotron	Correct model
4	Task routing: CHAT → gpt-oss	Correct model
5	Task routing: TRANSLATE → glm	Correct model
6	Non-streaming chat works	Content returned
7	Streaming SSE works	Tokens stream
8	Fallback on primary failure	Secondary model tried
9	analyze_alert() returns narrative	Text output
10	translate() returns Amharic	Amharic text output
11	POST /llm/chat	200 with SSE or JSON

#	Verification	Expected
12	POST /llm/analyze-alert/{id}	200 with narrative
13	POST /llm/briefing	200 with briefing text
14	POST /llm/translate	200 with translation
15	GET /llm/budget	200 with stats
16	OTX client imports	No errors
17	AbuseIPDB client imports	No errors
18	ThreatIntelService.lookup_ip()	Combined score
19	GET /intel/lookup/8.8.8.8	Reputation data
20	GET /intel/feeds/status	Feed status
21	POST /intel/sync	Pulse sync count
22	GET /intel/iocs	Empty placeholder
23	LLM + Intel routers mounted	OpenAPI /docs shows them
24	httpx in requirements.txt	Installed in Docker
25	Test flow scored by ML Worker	Score in logs
26	Alert generated from test flow	Alert in DB
27	All 5 containers stable	Up, not restarting
28	E2E: capture → score → alert → LLM narrative	Full pipeline works

Scope Adherence Verification (with Deviation)

Requirement	Source	Status	Notes
LLM Gateway multi-provider	PART4 §9.1	⚠ DEVIATED	OpenRouter replaces direct APIs — routing logic preserved
Prompt templates (4 types)	PART4 §9.2	☑	Unchanged
Streaming SSE	PART4 §9.3	☑	Unchanged
Budget tracking	PART4 §10	☑	Stats tracked per model
5 LLM API endpoints	PART2 §5.1	☑	chat, analyze, briefing, translate, budget
4 Intel API endpoints	PART2 §5.1	☑	iocs, lookup, sync, feeds/status

Requirement	Source	Status	Notes
OTX integration	PART4 §11.1	☑	Client implemented
AbuseIPDB integration	PART4 §11.1	☑	Client implemented
Ensemble weights	PART4 §1.2	☑	UNCHANGED: 0.30/0.45/0.25
Alert thresholds	PART4 §1.2	☑	UNCHANGED: 0.90/0.75/0.50/0.30

Tomorrow's Preview (Day 13)

- Hyperparameter tuning execution on VPS (tune_models.py)
- IOC correlation engine: match live flow IPs against threat_intel_iocs table
- POST /ml/retrain endpoint
- LLM auto-narrative on alert creation (async)
- WebSocket: broadcast LLM analysis to browser
- begin comprehensive testing with nmap/hping3

Task workflow for Day 12 (Week 3 Day 3) — ThreatMatrix AI Sprint 3
Focus: LLM Gateway via OpenRouter + Threat Intel Services + E2E Validation
Owner: Lead Architect — Frontend deferred to Full-Stack Dev
⚠ *DEVIATION: LLM providers via OpenRouter (documented, routing logic preserved)*
